

TD-12K V-Drums

Availability: May **RRP:** £2499

Roland's new V-Stage Series TD-12K makes the middle of the V-Drums line feel like first class. With mesh drum pads all the way around, drummers can sink their sticks into the best-feeling pads in the business. The bundled TD-12 COSM modelling drum module is an upgrade from the previous TD-8, as it shares the same stunning sound quality as Roland's flagship TD-20 sound module. The new Interval Control feature changes sounds in natural ways based on the speed of the drummer's strokes. Also included with the TD-12K is the new VH-11 floating Hi-Hat, which mounts on a standard hi-hat stand (optional). Also noteworthy is the TD-12K's snare drum pad. Now enlarged from eight inch to ten inch, it offers positional sensitivity. The TD-12K package includes the new MDS-12C drum stand with advanced-gripping pipe clamps. Cabling can be concealed inside the tubes for a clean, tidy appearance.

THE LOWDOWN: SELECTED SPEC
